

October 2015

Team: SC, RM, LC (75%)

Strategy

- [LC] Loss Severity Model presentation to Investment Committee
- [RM] Creating Collateral Replines presentation to Investment Committee
- [SC] Quarterly call presentation
- [RM] Rerun Mortgage Credit Availability model with new Accordion models which include DTI as an explanatory variable

Modeling

- **Baton** [RM]: Agency prepayment model
 - Completed a full initial iteration of the prepayment model for Conventionals
 - Integrated Pool-level tracking into Symphony
- **Accordion** [RM, LC]: Roll-rate and Loss Severity model for GSE loan-level data
 - [LC, RM] Finished Loss Severity model
 - [LC, RM] Integrated Loss Severity model with Accordion
 - [RM] Re-specified Loss model in Accordion to also include DTI
 - [RM] Created initial template for YB CRT Trader application

November 2015 Pipeline

Team: SC, RM, NW (25%), LC (75%)

Strategy

- [SC] Presentation on Cello credit modeling effort

Modeling

- **Accordion** [RM, LC]:
 - Knowledge transfer of YB CRT template to Neo
 - Investigate CRT remittance data related to losses
 - Redo CRT tracking reports to incorporate new version of Accordion that incorporates Loss Severity forecasts
- **Baton** [RM, LC]: Agency prepayment-model
 - Enhance model so that it can handle High LTV and Jumbo pools
 - Make standardized calculation of Refinance Incentive available across all platforms
 - Tracking Reports: Work with Symphony to ensure that the modeling group is generating all the data required for generating the Tracking Report. Write application (or have Technology write it) to produce Excel report that emulates the sample Tracking Report we have for the YieldBook prepayment model
- **Scale** [NW]: Integrate Bin Shao's implementation of Hull-White and Monte Carlo Simulation with current Quantlib-based implementation of the Yield Curve builder.
